

PACKING

We understand the importance of the package for the hawser transport and storage.

The wooden crate used in the packing is made from wood, with a robust design, suitable for exporting by truck and ship transport.

Each box has capacity for one or more hawsers, depending on diameter and length of the rope. The typical maximum weight will be 5 tonnes.

The inside is lined with cloth, to protect the rope from rough surfaces. Two slings around each hawser allow immediate withdrawal of the hawser through the top of the crate when required.

The crates are designed to be lifted by either fork lift truck or by slings placed under the base of the crate.

Upon arrival at the terminal / final destination, we recommend that the hawser(s) remain stored within the wooden crate until required for service.

The box should be stored within a dry, well ventilated store and shaded from direct sunlight.

Alternative packaging methods are available. We can supply hawser systems in open top containers or on steel / wooden reels.

Please consult us if you have special handling requirements.
